

BLINDART

CHIMNEY for fireplaces, stoves, etc...

CASTLE

PIRAMIDE

FAI DA TE

Why BLINDART

The terrible earthquake that recently hit our province and territory of L' Aquila, causing much damage to buildings but also many victims, has led us in finding an appropriate solution to make ANTISEISMIC ducts and chimneys of the plant chimneys protruding above the roof.

This is to make a contribution to greater security, since these structures in the event of an earthquake are among the first to fall, often representing a major danger to the safety of persons and property.

OBJECTIVE

Making a **ARTISTIC CHIMNEY** also be used in old city, seismically safe and really against the wind, with a modular structure is not rigid, which uses a brick chimneys protruding out of the roof no more than 50/60 cm, all without prejudice to the draft of the smoke, regardless of the position of the chimney than the ridge of the roof and / or other barriers that determine an area of reflux. **"BLINDART"** versions - **CASTLE** - **PIRAMIDE** - **FAI DA TE** is the evolution and integration of the patented "BLINDOCOM" applied art in a chimney, modular, prefabricated, which meets the above requirements.

HOW TO CHOOSE

In the first instance we recommend installing the chimney only artistic choosing between models CASTLE / PYRAMID / FAID, excluding the anti-wind "BLINDOCOM" steel.

This solution allows you to put in place an artistic ANTISEISMIC chimney flue using a roof that juts out of a maximum 50/60 cm. In all likelihood, this choice leads to a lower cost similar to a chimney built manually, but with the great advantage of the provision to make it at a later stage if necessary easily and certainly against the wind.

Any subsequent installation of the wind "BLINDOCOM" simply requires the intervention of an individual technician, which develops very quickly by removing a lightweight component set for this operation.

ADVANTAGES

In addition to the advantages outlined above it should be noted that in the presence of different plant flue chimneys, and then more generally identical in appearance between them, on the same building, with BLINDART you can take action to remedy problems draw fumes from one or more flues without affecting the aesthetics of existing achievements, overcoming problems of communal order, and so on. The system is extensively tested with regard to operation and consistency and is made in accordance with the regulations.
